

Are you at risk for heart attack?

If you have three or more risk factors, you owe it to yourself to find out.

A Heart Health Scan is a fast, safe and painless test of your coronary arteries to help determine your risk of coronary artery disease. Using our state-of-the-art 64-slice CT scanner, we take a series of images inside

your heart and blood vessels to determine if you have early warning signs for heart disease. You do not need to disrobe for this test.

We will report the findings of your Heart Health Scan to you and

to your primary care physician. He or she can then advise you of appropriate medical treatment and/or lifestyle changes to slow, halt or possibly even reverse your risk for heart attack. While you do not need a physician referral for this scan, it's always good to let your doctor know about anything you are doing for your health.

If you have risk factors, you owe it to yourself and your loved ones to find out your risk of heart disease. Schedule a Heart Health Scan by calling 765-864-8929.

Just \$99
for peace of mind.
No physician referral necessary.

A Heart Health Scan is not suitable if you have known heart disease or have had a previous heart attack or heart catheterization. This is an elective service at this special promotional price; therefore we cannot bill your insurance company and payment is due at the time of service.

If you need a Howard doctor, please call our Physician Information Line at 765-864-5939.
